Abstract. The purpose of this study was to determine whether the use of a computerized program could improve the accuracy of the measurement of the maximum voluntary contraction (MVC) force of the biceps brachii muscle. Ten subjects performed three MVC trials before and after training with a computerized program. The mean MVC force increased from 60.8 ± 9.7 N to 65.5 ± 10.2 N ($p < 0.05$). The coefficient of variation decreased from 10.5% to 7.5% ($p < 0.05$). The results suggest that the use of a computerized program can improve the accuracy of the measurement of the MVC force of the biceps brachii muscle.
